

**January
2011**

The genus *Hamamelis* is a group of 6 species of deciduous winter flowering shrubs, native to East Asia and North America. The leaves of these plants look very similar to our own native Hazel (*Corylus avellana*), though they are not related.

Hamamelis intermedia is the hybrid of a cross between *Hamamelis mollis* (China) and *Hamamelis japonica* (Japan).

This large shrub /small tree is available from Deepdale Trees as both a multistem and standard tree in a range of varieties.

Plant Profile

Name: *Hamamelis intermedia*

Common Name: Witch Hazel

Family: Hamamelidaceae

Height: 3-4m high x 3-4m wide

Shape: Medium-large shrub, forming a wide funnel shape

Demands: Sun-very light shade, Acid-slightly alkaline, well drained soils

Flowers: Intensely colourful and fragrant winter/early spring flowers. Flowering time and colour is dependent on the variety

Fruit: Small, brown, oval capsules

Autumn Colour: Yellow/Orange/Red

2.5 - 3.0m multi-stem in Air-Pot

Hamamelis 'Diane' 40/45cm girth

'Feuerzauber' 3-4m multistem

'Westerstede' 2-3m multistem

Autumn colour

Stunning Winter Flowers

Variety	Flower Colour	Flowering Time	Scent
'Arnold Promise'	Brilliant Yellow	Late	None
